Deployment

01 Programming Foundations

Weeks 1-3

- Core Java & OOP
- Collections & Streams
- Exception handling
- JDBC fundamentals

02 Backend Engineering

Weeks 4-7

- Spring Core & Spring Boot
- REST API design
- Hibernate & JPA
- MySQL database design

03 Frontend Engineering

Weeks 8-11

- HTML, CSS & responsive layout
- JavaScript fundamentals
- React components & hooks
- Connecting React to REST APIs

04 Version Control & Deployment

Weeks 12-14

- Git & GitHub workflows
- CI/CD basics
- Cloud deployment
- Environment configuration

05 Capstone & Interview Prep

Weeks 15-24

- Full stack capstone project
- Code review & best practices
- Technical interview prep
- Resume & portfolio review

Capstone: Ship a full stack Java application

From database schema to a deployed, production-style build

Built for Beginners

No prior coding experience needed — the program starts from programming fundamentals and builds up.

Real Project Work

12 hands-on projects across backend, frontend, and deployment, culminating in a full stack capstone.

Job-Ready Focus

Every module maps to skills product teams actually use, from schema design to deployment pipelines.

Interview Support

Dedicated capstone module includes code review, resume polish, and technical interview prep.
